

NATIONAL DISASTER INTELLIGENCE AGENCY

SITUATIONAL ASSESSMENT: EXECUTIVE

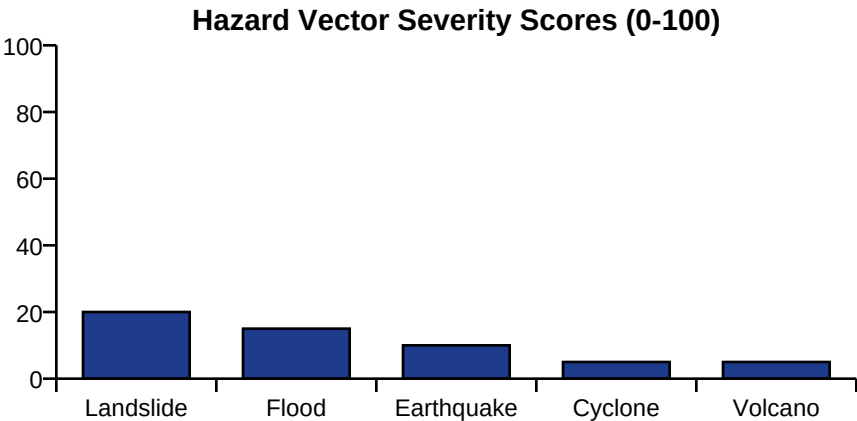

Report ID:	DIR-2026-0917-kedarnath-C060B	Generated:	2026-09-17 14:28
Target Zone:	Kedarnath Valley Scarp	Audit Window:	7D

1. EXECUTIVE SUMMARY

This Official Intelligence Report provides a comprehensive multi-hazard assessment for Kedarnath Valley Scarp. The area is currently exhibiting a LOW threat level concerning LANDSLIDE. Conditions should be monitored continuously, but do not warrant immediate emergency escalation at this time. All data presented herein is derived from the Virtual Sensor Fusion Engine, integrating real-time meteorological, seismic, and hydrological telemetry.

2. QUANTITATIVE RISK ASSESSMENT

The following table and chart outline the deterministic severity scores computed by the multi-hazard risk fusion engine based on live telemetry.

Hazard Vector	Score	Level	Primary Drivers (Explainability)
LANDSLIDE	20	LOW	
FLOOD	15	LOW	
EARTHQUAKE	10	LOW	
CYCLONE	5	LOW	

VOLCANO	5	LOW	
---------	---	-----	--

2.1 ROOT CAUSE ANALYSIS & DRIVER EXPLANATION

3. VIRTUAL SENSOR TELEMETRY

Raw meteorological and geospatial telemetry utilized during the generation of this report.

No telemetry recorded.

4. TACTICAL RESPONSE DIRECTIVES

Standard Operating Procedures (SOPs) dynamically prescribed based on the current hazard evaluation.

IMMEDIATE RESPONSE ACTIONS:

- Initiate mandatory evacuation
- Deploy rapid-response units to all vulnerable slopes

SHORT TERM RESPONSE ACTIONS:

- Reinforce retaining walls
- Install real-time slope displacement sensors
