

NATIONAL DISASTER INTELLIGENCE AGENCY

SITUATIONAL ASSESSMENT: EXECUTIVE

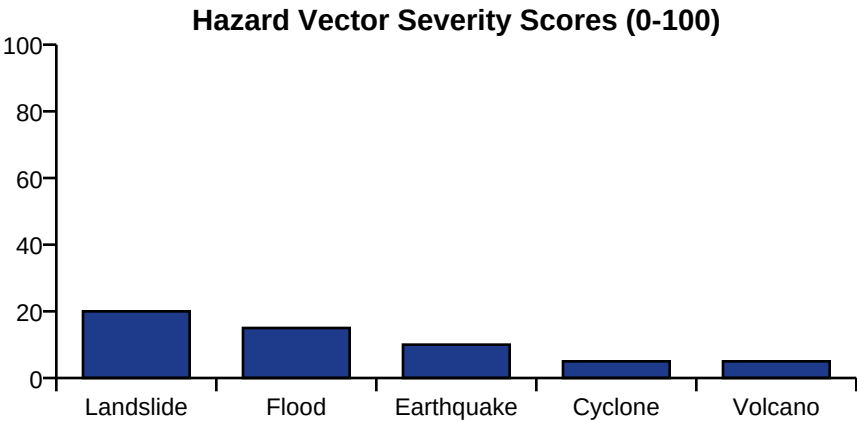

Report ID:	DIR-20260917-MUMBAI-7C846	Generated:	2026-09-17 14:34
Target Zone:	Mumbai Mithi Coastal Lowland	Audit Window:	Real-Time

1. EXECUTIVE SUMMARY

This Official Intelligence Report provides a comprehensive multi-hazard assessment for Mumbai Mithi Coastal Lowland. The area is currently exhibiting a LOW threat level concerning LANDSLIDE. Conditions should be monitored continuously, but do not warrant immediate emergency escalation at this time. All data presented herein is derived from the Virtual Sensor Fusion Engine, integrating real-time meteorological, seismic, and hydrological telemetry.

2. QUANTITATIVE RISK ASSESSMENT

The following table and chart outline the deterministic severity scores computed by the multi-hazard risk fusion engine based on live telemetry.

Hazard Vector	Score	Level	Primary Drivers (Explainability)
LANDSLIDE	20	LOW	
FLOOD	15	LOW	
EARTHQUAKE	10	LOW	

CYCLONE	5	LOW	
VOLCANO	5	LOW	

2.1 ROOT CAUSE ANALYSIS & DRIVER EXPLANATION

3. VIRTUAL SENSOR TELEMETRY

Raw meteorological and geospatial telemetry utilized during the generation of this report.

Parameter	Recorded Value	Unit	Sensor Health Status
Rainfall	0	mm	ONLINE
Seismic	1.7	mGal	ONLINE
Soil Moisture	25.6	%	ONLINE
Temperature	20	°C	ONLINE
Humidity	65	%	ONLINE
Wind Speed	10	km/h	ONLINE

4. TACTICAL RESPONSE DIRECTIVES

Standard Operating Procedures (SOPs) dynamically prescribed based on the current hazard evaluation.

IMMEDIATE RESPONSE ACTIONS:

- Elevate monitoring frequency to 1Hz telemetry

SHORT TERM RESPONSE ACTIONS:

- Inspect drainage infrastructure
- Review slope hazard maps
